

## Qualtrics Survey Report

I used the survey designing and generating site, Qualtrics, to make a survey about the demographics of the families that connected to us and of my figurative school that I run as principle. Within the survey are a multitude of questions types such as a multiple choice, Likert scale, short answer, and sliders. In order to distribute the survey, I posted it online to Facebook using the URL link given by Qualtrics. As a precaution, I made it know to the to whomever participated that all information given would be anonymous. Of the 57 people who took the survey, 55 responded saying they understood this. The two people who did not were automatically sent to the end of the survey and not allowed to participate any further.

From the collected data, I learned a lot about my school in terms of the families that make up the population. For example, 89% speak English and the rest speak something else. This lets me know that an education for foreign languages is needed in order to develop a worldly culture for my students. This also lets me know that I may need to hire someone who specializes in a foreign language to help those few students who need more direct attention they may not get in the general education classroom. Another example is that 15.22% of the family households make less than \$10,000 a year. This is very important information to know so that I can come along side the families to provide resources, tailor events to meet their needs, and try to help out those students teachers the best way possible.

Q19 - What language(s) does your family primarily speak at home...

Based on the data produced, I will be able to help more strategically the families that belong to our school system. When planning events, collecting data, testing, and allowing feedback, I can work toward allowing families to be more apart of their child's learning career. Also, knowing that the majority of the families and students speak English, by using the results given, I can help to try and facilitate celebration for other languages and cultures being represented within our school's community.
