

Name: Emily Ramos-Niaves
SPCE 210
Fall Semester

1. **Name of toy:**
Cuddle and Play
2. **Description:**
Cuddle and Play is a pillow with shapes and attachable matching shapes you can match with the shapes on the pillow.
3. **Developmental age range:**
toy is made for the ages 2 years and older.
4. **Cost to make the product:**
It will cost about \$36 or more depending on materials
5. **Intent of use:**
Cuddle and Play is meant for one user, but there are plenty of shapes to share.
6. **Developmental Skills assistance:**

This product will assist in the development of cognitive and fine and gross motor skills. If the user shares the pillow it can help with social development.
7. **How to DIY:**
To construct this toy, you will need one yard of Soft felt for the pillow portion; one pack of Poly-fil to stuff the pillow; a strong thread to sew the pillow and shapes; another yard of any color or kind of felt of your choosing for the shapes; and one pack of Craft Chord for the string that will attach to the pillow and shapes (so the shapes don't get lost)
8. **Possible Modifications:**
For any child with a cognitive disability this toy can be used to help children learn their shapes as well as how to pick objects up and categorize/match them. For a child with a physical disability such as Cerebral Palsy, I would suggest using a sturdier material for the shapes so they can grasp it easier. Also, for a child with low vision, I would suggest making the shapes more prominent on the pillow and add matching textures to the shapes.
